

Manage Your Business at an Affordable Price with SaaS from InTempo Core

Do you feel your operation is too small to justify the cost of a full rental software solution? Or, do you want to avoid dealing with system administrator chores, making daily backups, and installing new software versions? With Core's SaaS solution, there is no need to buy, administer or maintain a server, or purchase a perpetual software license.

Integrate your business operations onto a single technology platform.

Process Transactions with Flexibility

Transaction flexibility allows for processing in any sequence. Whether it's by rental period, inventory information or customer information, there is no predefined or mandatory process. Efficiently process quotes, reservations, contracts, invoices, purchase orders and work orders.

Manage Your Database

Define elements like rate structures, accounting relationships, product classes, depreciation and other attributes. Taking advantage of Windows® and Cache® object technology, Core's SaaS solution delivers complete data management. Utilize customer-specific pricing and transaction printing formats.

Manage Accounts Receivable

Record collection activity and view customer payment commitments historically, review and/or modify prior payments applications, and view a graph of historical "days to pay." Receive warnings when writing transactions if a customer's payment is delinquent or balance is over limit.

Control Security Settings

Administer security controls with ease by setting privileges according to employee's roles in the company.

Get Insights into Your Business

Core comes standard with dozens of the most common and useful management reports as well as customized versions of reports to help you utilize your information.

Key Benefits

- ✓ Save up to \$10,000 in upfront costs
- ✓ Achieve the maximum benefit of a rental software solution with minimum investment
- ✓ Eliminate large upfront cash outlays that come with minimal investment
- ✓ Remove the need for an onsite server. We have the responsibility for administering the whole system
- ✓ Significantly reduce the payback period of investing in an onsite solution

User-Friendly Contract Screen

The user-friendly contract screen resembles a familiar, printed invoice. As you move the cursor over the screen, the areas you point to automatically change color, making them easy to identify and select. View a selected area in detail by clicking on it.

Inventory Availability Screen

View inventory availability in graph form by date range and zoom in for a closer look at shortages and transaction details. This screen also displays optimizations, quotations, delinquent returns and other impacts on availability, all of which represent opportunities to avoid missed rentals.

Minimal System Requirements

Under Core's SaaS solution, your data resides on an InTempo server so all you need is a standard PC or thin client with internet connection and Remote Desktop. We take care of the rest.

WE ARE INTEMPO

Built on a foundation with decades of experience, InTempo delivers the right rental management software and unrivaled customer service to independent rental businesses across equipment, tool, event and specialty markets.
